

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): An information processing ~~apparatus~~ system,
comprising:

a recording apparatus;

an information processing apparatus comprising:

control means including,

user controlled acquisition means for acquiring control information for
controlling preset recording of a program ~~from~~ by accessing a remote program
information providing server through the internet based on a user request to access the
remote program information providing server, and

conversion means for converting contents described in said control
information acquired by said acquisition means into code information for setting said
program preset recording to ~~a remote~~ the recording apparatus, which is remote from
the control means; and

transmission means for receiving said code information from said conversion means
and for transmitting said code information obtained by said conversion means to said
recording apparatus under control of said control means;

the recording apparatus receiving said code information from said transmission
means, confirming whether said code information properly sets said program preset
recording, and displaying whether said program preset recording is proper or improper.

Claim 2 (Previously Presented): An information processing apparatus according to
claim 1, wherein said code information acquired by said acquisition means is G-code,
information.

Claim 3 (Original): An information processing apparatus according to claim 1, wherein said transmission means transmits said code information to said recording apparatus by use of an infrared signal.

Claim 4 (Original): An information processing apparatus according to claim 1, wherein said control information includes broadcast channel information, broadcast date, broadcast start time, and recording end time of said program.

Claim 5 (Currently Amended): An information processing method for use in a system including an information processing apparatus and a recording apparatus, comprising:

in a control device in the information processing apparatus,

under user control acquiring control information for controlling preset recording of a program ~~from~~ by accessing a remote program information providing server through the internet based on a user request to access the remote program information providing server, and

converting contents described in said control information acquired by said acquiring into code information for setting said program preset recording to ~~a remote~~ the recording apparatus, which is remote and separate from the control device; and transmitting said code information obtained by said converting to said recording apparatus under control of said control device;

in the recording apparatus, receiving said code information from said transmission means, confirming whether said code information properly sets said program preset recording, and displaying whether said program preset recording is proper or improper.

Claim 6 (Currently Amended): A program storage medium storing a computer-readable program for use in a system including an information processing apparatus and a recording apparatus, said program storage medium comprising:

in a control device in the information processing apparatus,

under user control acquiring control information for controlling preset recording of a program ~~from~~ by accessing a program information providing server through the internet based on a user request to access the remote program information providing server, and

converting contents described in said control information acquired by said acquiring into code information for setting said program preset recording to ~~a remote~~ the recording apparatus, which is remote and separate from the control device; and transmitting said code information obtained by said converting to said recording apparatus under control of said control device;

in the recording apparatus, receiving said code information from said transmission means, confirming whether said code information properly sets said program preset recording, and displaying whether said program preset recording is proper or improper.

Claim 7 (Currently Amended): An information processing ~~apparatus~~ system, comprising:

a recording apparatus;

an information processing apparatus comprising:

a controller configured to,

under user control acquire control information for controlling preset recording of a program ~~from~~ by accessing a remote program information providing server

through the internet based on a user request to access the remote program information providing server, and

convert contents described in said acquired control information into code information for setting said program preset recording to a remote recording apparatus separate from the controller; and

a transmitter configured to receive said code information from said controller and to transmit said received code information to said recording apparatus under control of said controller;

the recording apparatus receiving said code information from said transmission means, confirming whether said code information properly sets said program preset recording, and displaying whether said program preset recording is proper or improper.

Claim 8 (Previously Presented): An information processing apparatus according to claim 7, wherein said code information acquired by the controller is G-code information.

Claim 9 (Previously Presented): An information processing apparatus according to claim 7, wherein said transmitter transmits said code information to said recording apparatus by use of an infrared signal.

Claim 10 (Previously Presented): An information processing apparatus according to claim 7, wherein said control information includes broadcast channel information, broadcast date, broadcast start time, and recording end time of said program.
